Professional Summary

M.Sc. Computer Science (Data Analytics) student with a background in Computer Science and hands-on experience in Python, SQL, data analysis, machine learning, and data visualization. Experienced in building data-driven solutions, analyzing real-world datasets, developing predictive models, and communicating insights through visualizations and dashboards. Interested in applying analytical and research skills to social development, sustainability, education, and community-focused initiatives.

Statement of Purpose

I am interested in pursuing an academic internship with TCS Foundation to apply my background in Computer Science and Data Analytics to real-world social development challenges. The Foundation's focus on using technology, research, partnerships, and community engagement to create meaningful social impact strongly aligns with my interest in using data to understand problems and support evidence-based decision-making.

I am particularly interested in the Data Analytics and Insights area, where I can contribute through data cleaning, exploratory analysis, statistical and machine learning techniques, visualization, and interpretation of findings. Through projects involving customer analytics, predictive modeling, anomaly detection, and data visualization, I have developed experience working with real-world datasets and translating analytical results into meaningful insights. I hope to apply these skills to TCS Foundation initiatives while learning from professionals working in the social sector and contributing to outcomes that benefit communities.

Education

M.Sc. Computer Science (Data Analytics)

Rajagiri College, Kalamassery

Pursuing

Bachelor of Science in Computer Science

University of Kerala, UIT Koravankonam

CGPA: 6.98/10

Projects

E-Commerce Customer Segmentation & Purchase Prediction

Python — Scikit-learn — Pandas — SQL —

Power BI

- Built an end-to-end customer analytics pipeline using transactional e-commerce data, engineering RFM and behavioral features to analyze customer purchasing patterns.
- Compared K-Means, Hierarchical Clustering, and DBSCAN using clustering metrics and business-oriented segment profiling to identify customer groups.
- Developed a time-based machine learning classifier to predict repeat-purchase likelihood, evaluating performance using F1-score, ROC-AUC, precision, and recall.
- Created an interactive Power BI dashboard to visualize customer segments, purchasing behavior, revenue contribution, and repeat-purchase predictions for targeted retention and marketing decisions.

Sensor Anomaly Detection System

Python — Pandas — NumPy — Scikit-learn — Jupyter

- Developed an anomaly detection pipeline for identifying outliers in structured datasets.
- Implemented data preprocessing, feature scaling, model training, and threshold optimization to improve classification performance.
- Evaluated model performance using F1-score, confusion matrix, and precision-recall analysis.
- Achieved an F1-score of **0.5144**, ranking approximately **103rd among 951 participants** in a data science hiring competition.

Technical Skills

Programming: Python

Data Analytics: Pandas, NumPy, Excel, Data Cleaning, Exploratory Data Analysis, Data

Visualization **Machine Learning:** Scikit-learn, XGBoost, Feature Engineering, Model Evaluation

Databases: SQL, PostgreSQL

Visualization & BI: Power BI, Matplotlib

Tools: Jupyter Notebook, Git, GitHub

IDE : VsCode, Pycharm

Certifications & Programs

Data Science Program — Boston Institute of Analytics, Thiruvananthapuram

Soft Skills

Analytical Thinking — Problem Solving — Research & Critical Thinking — Communication — Team Collaboration — Adaptability
